

## Closed Loop Hall AC/DC Current Sensor CYHCS-D8

This Hall Effect current sensor is based on closed loop compensating principle and can be used for measurement of DC and AC current, pulse currents etc. The output of the transducer reflects the real wave of the current in the carrying conductor.

## Dimensions (mm)

## Sensor Connections

### 1) For Measurement of Bidirectional Current

### 2) For Measurement of Unidirectional Current

Two diodes for instance IN4007 must be connected at the output of the sensor in order to guarantee the sensor to work well.

## Operating instructions

1. Connect the terminals of power source, output respectively and correctly, never make wrong connection for DC current.
2. Temperature of the primary conductor should not exceed 100 °C.
3. Dynamic performances ( $di/dt$  and the response time) are the best with a single bar completely filling the primary hole.
4. In order to achieve the best magnetic coupling, the primary windings have to be wound over the top edge of the device.
